

MEDigi a national project in medical education in Finland 2018-2021

Ministry of Education and Culture
& all 5 Medical Faculties in Finland
(3,4 million euros)

EURACT Spring meeting 12th April, 2019

Helena Karppinen, member of section for GP, Helsinki, Finland

About the project

The objective of the project is to harmonise and modernise medical education in Finland by utilising digitalisation in medical and dentistry teaching. The project is part of the national development work of medical education. The aim of harmonising and digitising national teaching is to ensure the high-level competence of graduating students in the Finnish health care system and to safeguard digital abilities in the changing information society.

The project objectives include:

- To specify competence in the medical fields
- To create an online service for the basic medical and dental education
- To produce electronic study material
- To develop electronic exam and evaluation methods
- To develop the competence of students in medical fields in the use of electronic health care tools (eHealth)
- To create a digital pedagogy training model for the teaching staff.
